

Exercise 1: Logging Error Messages and Warning Levels (MANDATORY)

Created a basic SLF4J logger and printed one error and one warning message.

LoggingExample.java:

```
package com.example.sl4j;

import org.slf4j.Logger;
import org.slf4j.LoggerFactory;

public class LoggingExample {

    private static final Logger logger =
LoggerFactory.getLogger(LoggingExample.class);
    public static void main(String[] args) {
        logger.error("This is an error message");
        logger.warn("This is a warning message");
    }
}
```

Output:

```
--- resources:3.0.2:resources (default-resources) @ week2-sl4j-logging ---
Using platform encoding (UTF-8 actually) to copy filtered resources, i.e. build is platform dependent!
Copying 1 resource

--- compiler:3.8.0:compile (default-compile) @ week2-sl4j-logging ---
Nothing to compile - all classes are up to date

--- exec:3.1.0:exec (default-cli) @ week2-sl4j-logging ---
14:06:06.664 [main] ERROR com.example.sl4j.LoggingExample - This is an error message
14:06:06.664 [main] WARN  com.example.sl4j.LoggingExample - This is a warning message
